DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 6-10 and 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foley et al. (6,193,757; cited by Applicant).

Foley et al. disclose a device 80 for treating vertebrae comprising biocompatible rigid members 82, 84 having ribs 88 (and the walls surrounding channel 86) extending along a common base thereof (see, e.g., Figs. 13-16). The members are hinged together via portion 98. The device is collapsed and inserted into an intervertebral space and then disengaged and deployed to stabilize the adjacent bone (see Fig. 9a). A treatment medium **G** is introduced into the space between the members after deployment. Foley et al. clearly disclose the claimed invention except for both of the members having a plurality of ribs. However, it would have been obvious to have provided more ribs on both members, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8. Moreover, doing so would have provided increased and/or enhanced guiding support for the device.

Art Unit: 3733

Response to Arguments

Applicant's arguments filed 27 April 2007 have been fully considered but they are not persuasive.

In response to Applicant's argument that Foley et al. does not dislclose the ribs of Applicant's invention, it is noted that Foley et al. clearly show at least three ribs on the device. It would have been obvious to have provided another number of ribs since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233. It is also noted that even though a figure may show a single piece, the piece comprises multiple members or portions as claimed. Finally, in response to Applicant's argument pertaining to the manner in which the device is intended to be inserted, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Comstock whose telephone number is (571) 272-4710. Please leave a detailed voice message if examiner is unavailable. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached at (571) 272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
